What do we want to create?

We want to create a user side of food ordering mobile application using react native.

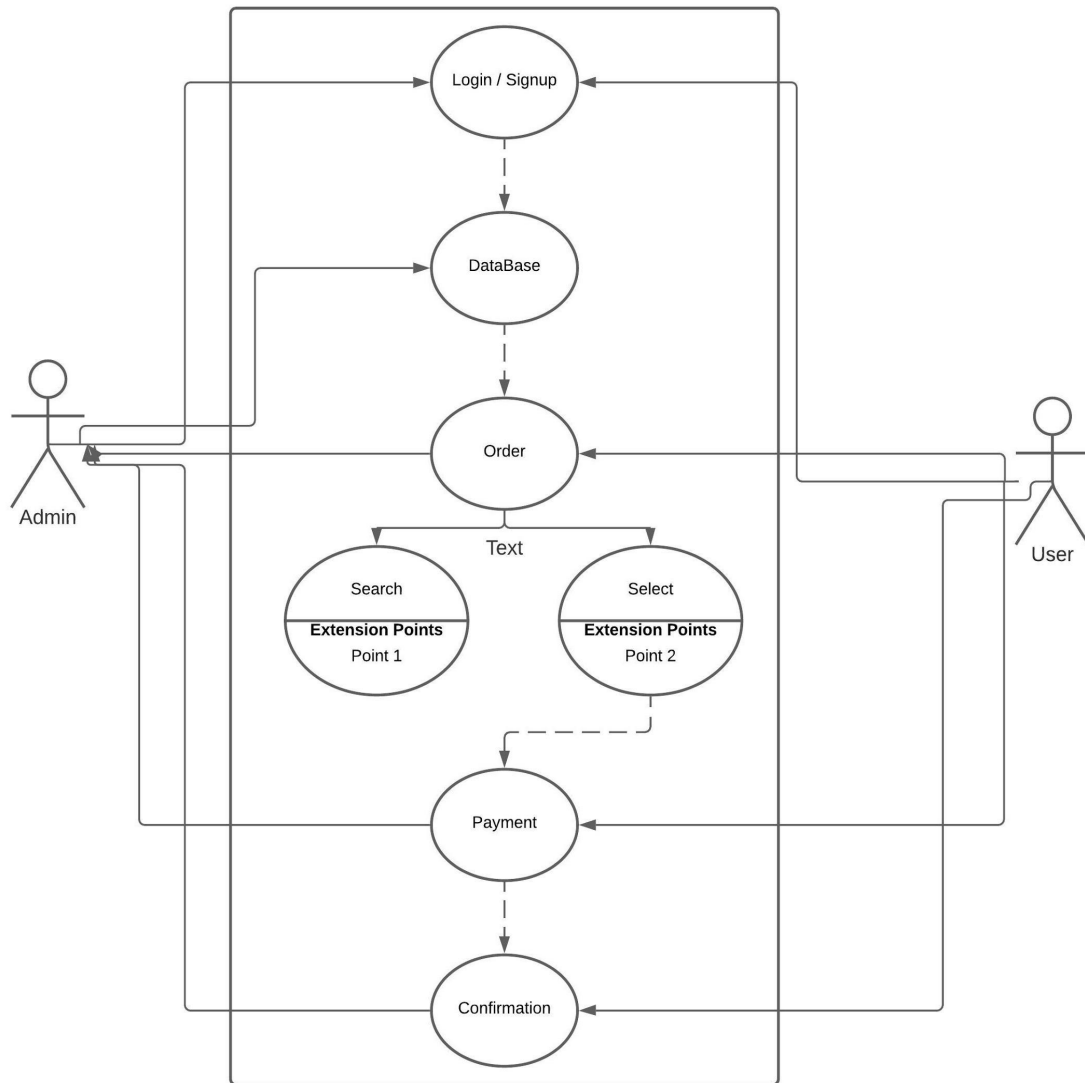

Problem Statement

As we all know that everyone likes to eat food outside but some people don't want to go out and order their food all they want is to get their food order at their home just by ordering through their mobile phones. But here comes the problem that sometimes the person can't find the exact contact for the desired food hub or the contact number is busy to receive the order. Our food ordering mobile application FoodIt is designed to overcome those problems by giving choices to the user and directly providing them to place their food orders just by using their mobile devices no contacts or busy numbers will be there anymore.

Proposed Solution

We will develop a mobile application to overcome the problem statement mentioned above so that the users can easily login and place their orders. Therefore FoodIt will be developed to provide the users with a variety of restaurants, dhabas or dishes to choose from and to place the order just by using their mobile phone with the help of our application. The food ordering application sets up a food menu and the customers can easily place the order as per they like. Also, the customers can easily track their orders. The management maintains customer's database, and improves food delivery services.

Use Case Diagram

Project Progress

APP.js File Code:

```
import { Text, View } from 'react-native';

import 'react-native-gesture-handler';

import * as React from 'react';

import
  MaterialCommunityIcons
from 'react-native-vector-icons/MaterialCommunityIcons';

import {
  NavigationContainer
} from '@react-navigation/native';

import {
  createStackNavigator
} from '@react-navigation/stack';

import {
  createBottomTabNavigator
} from '@react-navigation/bottom-tabs';

import SplashScreen from '../Screens/SplashScreen';
import HomeScreen from '../Screens/HomeScreen';
import SurajDhaba from '../Screens/SurajDhaba';
import Spicy from '../Screens/Spicy';
```

```

import Loginpage from "../Screens/Loginpage";

import Signup from "../Screens/Signup";

const Stack = createStackNavigator();

function Home() {

  return (

    <Stack.Navigator

      initialRouteName="Home"

      screenOptions={{

        headerStyle: { backgroundColor: '#3944BC' },

        headerTintColor: '#fff',

        headerTitleStyle: { fontWeight: 'bold' }

      }}>

      <Stack.Screen

        name="Home"

        component={HomeScreen}

        options={{ title: 'FoodIt' }}/>

      <Stack.Screen

        name="SurajDhaba"

        component={SurajDhaba}

        options={{ title: 'Suraj Dhaba' }} />

      <Stack.Screen

        name="Spicy"

        component={Spicy}

        options={{ title: 'Spicy Restaurant' }} />

    </Stack.Navigator>
  );
}

```

```

    );
}

function Search() {
    return (
        <View style={{ flex: 1, justifyContent: 'center', alignItems: 'center' }}>
            <Text>Search Page</Text>
        </View>
    );
}

function Cart() {
    return (
        <View style={{ flex: 1, justifyContent: 'center', alignItems: 'center' }}>
            <Text>Cart</Text>
        </View>
    );
}

function Profile() {
    return (

Cart Page

Signup Page

The image shows a mobile application interface for the 'FOODit.' app. At the top, there is a blue header bar with a back arrow and the word 'Signup'. Below this is a large red rectangle containing the 'FOODit.' logo in white. The main content area is light gray and contains four rounded rectangular input fields for 'Username/Id', 'Email', 'Password', and 'Mobile No.'. Below these fields are two rounded rectangular buttons: 'SignUp' and 'Back to login'. At the bottom, there is a navigation bar with four icons: a house for 'Home', a magnifying glass for 'Search', a shopping cart for 'Cart', and a person for 'Profile'. The 'Profile' icon is highlighted with a blue underline.
